THE ███████ SEEK █ AND ██████████ DESTROY PROFILE ████████

Understanding the seek and destroy profile.

Identifying and *anticipating* its structure.

INDEX

## 1. WHAT IS *THE SEEK AND DESTROY PROFILE?*

The seek and destroy profile is characterized by a lack of clear direction on higher timeframes, leading to consolidation. During this phase, prices move to sweep liquidity on both sides of the market without establishing a definitive trend

This profile can be challenging to navigate due to the choppy nature of price movements. As liquidity is continuously targeted, traders frequently find themselves caught on both sides of the market without a clear bias.

Indeed, the seek and destroy profile exhibits a fractal nature, mirroring the fractal characteristics of price movements themselves. This means that regardless of the timeframe being observed, we can encounter this type of market structure.

2. WHEN CAN WE EXPECT *THE SEEK AND DESTROY PROFILE?*

- When price finds itself at equilibrium on 4H or 1D timeframe.
- Important news events.
- When price reaches a higher timeframe objective.
- When daily candle is an inside candle.

3. CAN WE TRADE *SEEK AND DESTROY PROFILE?*

Indeed, while seek and destroy profiles can present challenges due to their lack of clear direction and increased choppiness, there are proven methods and models that can effectively navigate these market conditions. When we can understand the dynamics of seek and destroy profiles we can develop strategies to capitalize on the opportunities the profile presents.
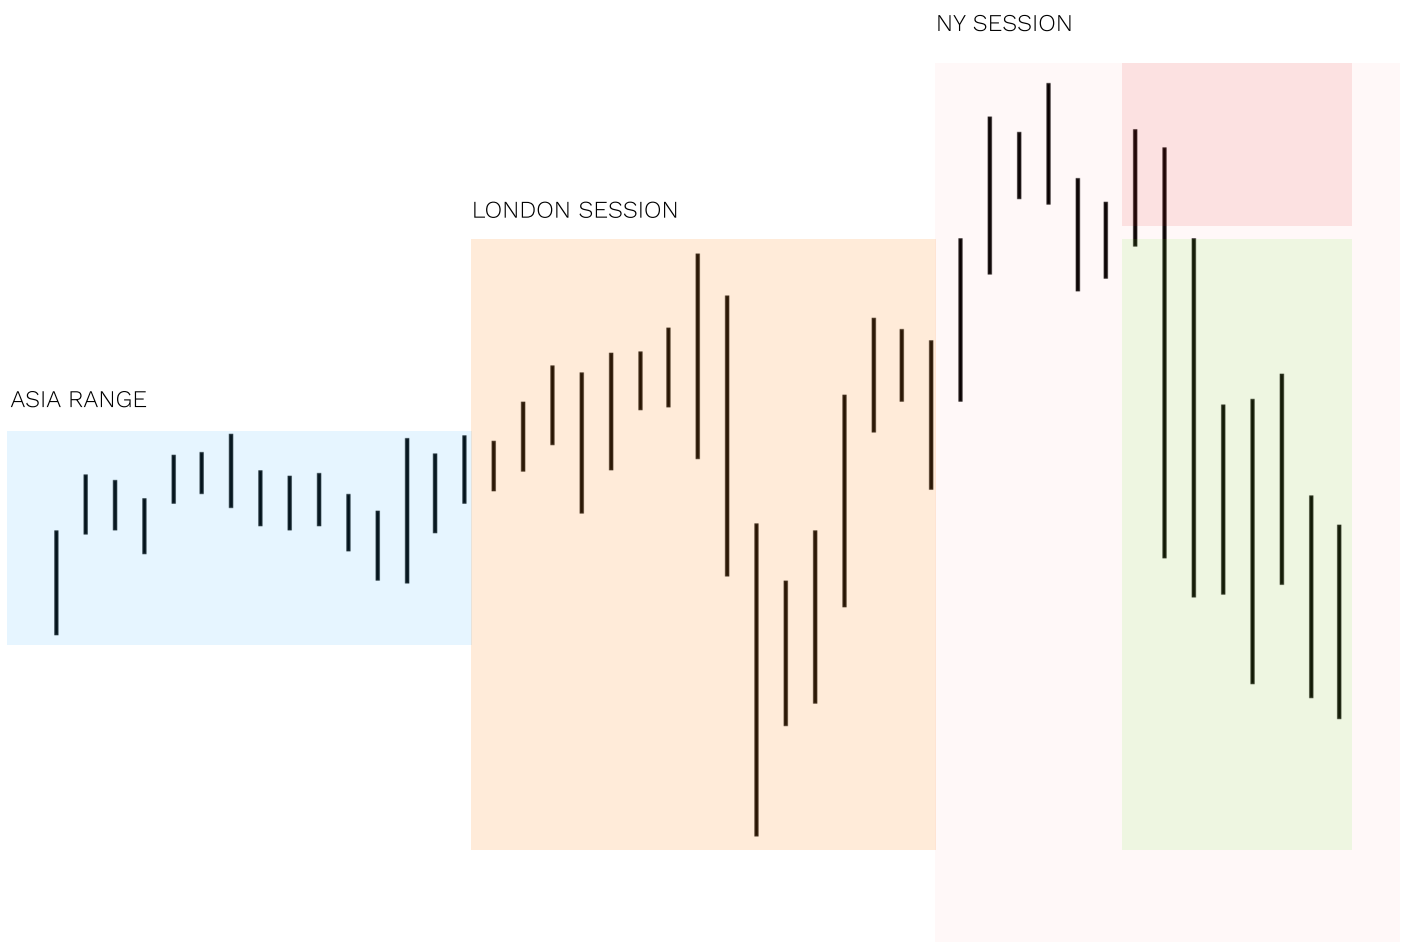

> (!) Trading in unfavorable conditions, although possible, is not recommended, and Seek and Destroy (S&D) profiles are acknowledged for their low probability outcomes.

4. SESSION *SEEK & DESTROY PROFILE* MODEL

A straightforward trading model aligned with the Seek and Destroy (S&D) profile could be outlined as follows:

1. Asia range creates consolidation.
2. London session takes both buy and sell side of Asia range.
3. Expecting S&D profile, when NY session takes any of the liquidity on one side, and we see price moving towards the opposite liquidity, we can try to position ourselves into a trade aligned with the movement.
